                                                                                                                                                                      CC The present sequence represents the gene sequence for Trichomonas CC vaginalis wild type S-adenosyl homocysteinase (SAHH, S-adenosyl CC homocysteine hydrolase). The wild type SAHH gene sequence is cused to generate a novel recombinant SAHH gene sequence, His-SAHH, CC (AASO9278) which comprises various point mutations and an additional polynucleotide sequence which encodes for an extra 6 N-terminal histidine CC residues. The invention relates to a method for assessing therapeutic cc comprising measuring one or more reaction products in a sample CC comprising measuring one or more reaction products in a sample CC containing glycine N-methyltransferase (GMT), SAHH or His-SAHH, and CC proportional to the level of one or more products is directly CC protocol, where the level of SAM in the sample. The method is useful CC proportional to the level of SAM in a biological sample and may CC protocol, where conditions or progress of the therapy may be monitored. CC inhibitors and inactivators of the enzyme for use as reagents themselves CC as potential therapeutics, e.g. in cancer, malaria, arthritis and other CC combination with S-adenosyl homocysteine (SAH) analogues.

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes.

The metabolic pathway proteins of the invention include enzymes involved in the lysine and methionine biosynthetic pathways. The polynucleotide sequences of the invention can be used for the large-scale production and/or modulation of expression of fine chemicals such as lysine and methionine. The sequences of the invention may be used to identify C. glutamicum and related organisms e.g. C. dliptheriae in a subject to detect diphtheria.

AAS96073-AAS96132 represent C. glutamicum genes encoding the novel metabolic pathway proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding metabolic pathway proteins from glutamicum, useful for producing methionine and lysine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-MAR-2000;

                                                                                                                                                                                                                                                                             188793
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly I-lysine. The present sequence is a nucleic acid described Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Coryneform bacterium; amino acid synthesis; vitamin; saccharide; organic acid synthesis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C glutamicum coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EP1108790-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAH65801 standard; DNA; 1422

                                                           withdrawn from TB patients, or PPD positive individuals, 6 months after diagnosis, (d) PP induces a specific antibody response in a TB patient, as determined by enzyme linked immunosorbent assay (ELISA) technique or a western blot, (e) PP induces a positive delayed type hypersensitivity (DTH) response, determined by intradermal injection. (I) and (II) are useful in preparing a prophylactic or therapeutic medicine as a vaccine for induction of a protective or generation of an immune response in a mammal against infection with a virulent Mycobacterium. (I) and (II) are also useful as diagnostic reagent for the diagnosis of a virulent Mycobacterium infection. The vaccine of the invention induces efficient immunological memory, providing long term protection against TB. This secuence as a Microbacterium theory.
                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel polypeptide (PP) of somatic proteins extract (I) which have tuberculostatic activity. (I) or their subsequence has at least one of the following properties: (a) the PP induces an in vitro recall response, or an in vitro response, during primary infection with virulent Mycobacterium, determined by a release of interferon (IFN)-gamma, (b) PP induces a protective immunity, determined by vaccinating an animal with PP and an adjuvant, three times at two weeks intervals, (c) PP induces an in vitro response, or in vitro recall response, determined by release of IFN-gamma of at least 1000 pg/ml or psychology, respectively, from PPTIPheTAL BLOOM MODORUCLEAR CELLS (PBMC) with the particular controlled to the particular controlled to the process of the properties of the properties of the process of the process of the properties of the process of the process
                                                        sequence encodes a Microbacterium

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic saturated and unsaturated fatty acids, diols, carbohydrates, aromatic

glutamicum

compounds, vitamins, cofactors, polyketides and enzymes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80
                                           glutamicum genes encoding metabolic pathway (MP) proteins (AAU71863-AAU71922). The metabolic pathway proteins of the invention include enzymes involved in the lysine and methionine biosynthetic pathways. The polynucleotide sequences of the invention can be used for the large-scale production and/or modulation of expression of fine chemicals such as lysine and methionine. The sequences of the invention may be used to identify C. glutamicum and related organisms e.g. C. diphtheriae in a subject to detect diphtheria.

AAS96073-AAS96132 represent C. glutamicum genes encoding the novel

A cDNA clone, designated DBG, was isolated from an asparagus cDNA library by homology searching, and the full-length sequence was obtd. by library screening using DBG as probe. The asparagus SHH sequence was used to obtain SHH genes from other plant species. Analysis of the Arabidopsis thaliana SHH gene (AAT44514) revealed a 1849 bp promoter (AAT44514) which can be used to dive expression of effector (e.g.

                                                                                                                                                                                                                            cultured in Murashige-Skoog medium contg. kinetin and indoleacetic acid. mRNA was extracted from the cultured cells by conventional methods and a cDNA library prepd. mRNA extracted from untreated floral axis and the above mRNA were used to prep. corresp. cDNA probes which were used to screen the cDNA library. The clone from untreated floral axis mRNA did not hybridise but the treated mRNA probe hybridised to a clone of 1,812 bp. The clone expresses at floral differentiation. The gene can be introduced into other floral differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nicotiana tabacum.

CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the more representation of the codon of the codon of the codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon.

Gene prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Direct Submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            are also included but some of these may be fortuitous. The length in codons is given for each CDS. The highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Details of S. coelicolor sequencing at the Sanger Centre are available on the World Wide Web.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct in the codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cole,S.T., Brosch,R., Parkhill,J., Garnier,T., Churcher,C.,
